

Viveo

updates its full range of products

Robert DE PICCIOTTO
Viveo Switzerland CEO

Viveo, a major provider of banking software, enhances its full range of solutions satisfying the stakes of risk management and cost reduction not only for the international banking community but also for the world of international trade.

European software developer

Referenced for the first time in the IBS classification of the 50 most sold and deployed banking solutions in the world, Viveo was noticed by occupying directly the 6th place.

This position, associated to the second place in terms of growth, demonstrated the technological relevance and the international influence of Viveo's software offer that lead in 2008 to more than 45 new signatures and more than 80 installations over the 5 continents.

Richness of the offer

Viveo delivers a vast range of software solutions for the financial sector. In particular, through its Swiss entity specialized since 1986 in Private Banking and Commodities Trading, Viveo delivers specialized modular software products, customizable and ready to install.

For the **Private Banking** market, Viveo makes a significant step forward with the new release of **Newbanking**. The latest release includes a brand new graphical user interface with a focus on ergonomics and users productivity. In addition, Viveo Newbanking is now enriched with a powerful Private Equities module and with advanced functionalities for the front office. Viveo Newbanking is the solution adopted by numerous banks, as well as financial institutions in Switzerland and Luxemburg.

For the **Independent Asset Managers**, Viveo proposes a new product dedicated for their activities.

Viveo Wealth Manager offers a full Web solution with instant deployment capability and an intuitive interface for the consolidated management of clients' accounts. Emphasis is to provide instant and flexible consolidations of portfolios, to allow quick decisions and immediate generation of orders to the agents or brokers and finally to automate the reconciliation process.

For the **Commodities & Trade Finance** market, Viveo proposes two solutions: Fintrade and Fintrade Bank. Fintrade is the solution implemented by numerous commodity traders (soft commodities and energy market). **Viveo Fintrade** is a proven vertical ERP for the international trade, providing a complete solution, fully integrated from Trading to Logistics, Finance and Accounting.

For banks active in **Commodities and Trade Finance**, Viveo Fintrade Bank solution, presented at the Sibos 2009 edition, includes now a Front Office module. This new module associated to the middle and back office modules, provides banks with a complete solution for managing different types of Trade Finance operations with a particular emphasis on transactional based financing.

Viveo Fintrade Bank provides a global approach to trade finance operations: the definition of client's credit framework, the implementation of the credit mechanism up to the detailed management of the transactions. The system allows for a rigorous control and audit mechanism that is essential for helping the bank to identify, evaluate and manage the particular risks associated with these types of operations.

With Viveo Fintrade Bank, the banks have at their disposal a complete solution to follow all the processes of their Trade Finance department, to provide a consolidated view of the clients' positions coupled with a permanent risk evaluation for each transaction and a full drill down capability. This system allows for an automatic generation of the accounting entries and Swift messages related to the Documentary Credits, Guarantees and Transfers.

“More than ever, our software development activity is based on one priority: Risk Management. In fact, in these stormy times, we are striving to provide all our clients not only with solutions that enforce their operational reactivity but also with all the tools allowing them to evaluate and analyze the risks and therefore to take the decision that best suits each situation.”
